

# Deus Ex Machina

The Deus Ex Machina (Latin for “God From the Machine”) filter brings forth the underlying technology behind modern day photography or just adds a cool tech look to any image. It does this by adding 3 main elements. The first is a blue or green tint to give the image a cold, emotionless look. Secondly, horizontal “scanlines” are added to give the impression that the image is being viewed through a computer screen. Finally, vertical strings of 1’s and 0’s are added randomly and transparently throughout the image to represent the underlying machine instructions behind every computer process. Each string is 8 digits in length to represent a single byte.
